IEEE 118-bus | RQPFlow vs. sparse Newton

Task 1.3 · N feasible validation · 100 cases · 3 timing repeats · CPU FP64 · batch = 1

Left: median error at equal elapsed time; each case holds its last accepted error until the next iterate (steps).
Shading: 25–75% error (left), time (right). Right: median first-passage time. Timing repeats reduced per case.
Online timing excludes reference compilation (14.95 ms). Error uses identical power equations for all methods.
